

COMPOSITE ARTICLES COMPRISING RESORCINOL ARYLATE POLYESTER  
AND METHOD FOR MAKING THEREOF

ABSTRACT

A shaped composite article is prepared by a process wherein an aesthetic laminate having a clear outer arylate layer and a colored compatible resin layer is thermoformed into a desired shape, and then compression molded together with a reinforced resin material containing compatible resin to form a color composite of the  
5 desired shape having an outer layer of clear arylate polyester polymer with the compatible resin layer forming an adherent bond with the compatible resin in the resin reinforced material.
